

How To Maintain A Window Air Conditioner?

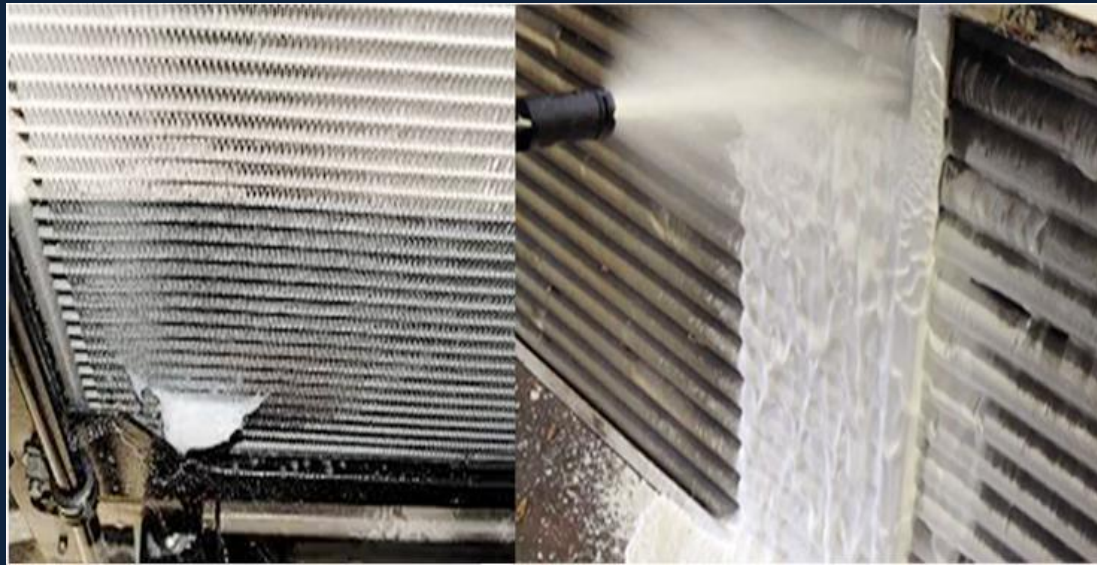

Regular cleaning of your **air conditioning system** and maintaining it is necessary. Window **air conditioning system** has a simple process than other types of air conditioners system.

Air conditioner filter Cleaning

- By cleaning your filter the air will flow in a good amount in the room and keep you chill.
- To clean the filter you need to open the front panel first then read all the instruction manual to open the front panel carefully.
- You can vacuum it and then soak it in warm and soapy water.
- Before installing again rinse it off and let it dry completely.
- By cleaning the filter regularly you'll maintain a healthy and hygienic environment.

Fins Cleaning

- There are two types of fins in the air conditioning system. One is outside and the other one is inside facing you.
- Both these fins easily get dirty by the air pass through these fins, which gets dirty over time, you can clean these fins using running water, dishwashing detergent and a soft brush.
- Uninstall the **air conditioning system** from the panel cover and take it out, you might need an extra help as the unit is quite heavy.

Straighten The Fins

- If you see that the fins are bent, with the help of a fine comb you can straighten it.
- A fin comb is a small comb-like thing, which can be bought from your local store.
- By using this you can straighten the fins of your **air conditioner system**.

Cleaning Of Fans And Blower Box

- While you're cleaning the fins, make sure you're cleaning the fans and blower box properly and thoroughly clean the fan as well.
- Fans rotate at very high speed due to which it gets easily dirty and dust buildup makes the fan look muddy.
- After cleaning let the air conditioner system dry naturally and install it after drying.
